Department of Finance  
**INSURANCE COMMISSION**  
1071 United Nations Avenue  
Manila

Circular Letter (CL) No.:	2016-68
Date:	28 December 2016
Supersedes:	CL No. 2015-30

**CIRCULAR LETTER**

**TO :** ALL LIFE AND NON-LIFE INSURANCE COMPANIES  
OPERATING IN THE PHILIPPINES

**SUBJECT :** AMENDED RISK-BASED CAPITAL (RBC2) FRAMEWORK

---

**WHEREAS**, the Amended Insurance Code was passed into law on 15 August 2013 and took effect on 20 September 2013;

**WHEREAS**, the Insurance Commissioner under Section 437 of the Amended Insurance Code may issue such rulings, instructions, circulars, orders and decisions as may be deemed necessary to secure enforcement of the Amended Insurance Code, to ensure the efficient regulation of the insurance industry in accordance with global best practices and to protect the insuring public;

**WHEREAS**, Section 200 of the Amended Insurance Code provides that an insurance company doing business in the Philippines shall at all times maintain the minimum-paid up capital, and the net worth requirements as prescribed by the Commissioner;

**WHEREAS**, Section 200 requires that such solvency requirements shall be based on internationally accepted solvency frameworks and adopted only after due consultation with the insurance industry associations;

**WHEREAS**, due consultations through series of parallel runs and dialogues have been conducted to assess the soundness and reasonableness of the proposed amendments to the Risk-Based Capital (RBC) Framework;

**NOW, THEREFORE**, pursuant to the authority vested in me under Section 437 of the Amended Insurance Code, and after a series of consultations, dialogues, and discussions conducted and held with the insurance industry and other stakeholders, the following rules and regulations of the Amended RBC Framework to be known as "RBC2 Framework" are hereby promulgated:

## **Section 1. The RBC 2 Framework**

1. The Insurance Commission (IC) has adopted a three (3) pillar risk-based approach to solvency. The pillars are comprised of the following:
  - 1.1. Pillar 1 includes the quantitative requirements in relation to the calculation of capital requirements and recognition of eligible capital;
  - 1.2. Pillar 2 covers the governance and risk management requirement that consist of a supervisory review process which may include a supervisory adjustment to capital; and
  - 1.3. Pillar 3 comprises the disclosure requirements designed to encourage market discipline.
2. All insurance companies shall at all times hold the RBC requirement determined in accordance with the rules and guidelines set forth in Section 2 of this Circular, plus any additional supervisory adjustment to capital that may be required by the IC.
3. All insurance companies must satisfy the minimum statutory RBC Ratio required under Section 2.

## **Section 2. Pillar 1 Requirements: Risk-Based Capital Ratio and Risk-Based Capital Requirement**

### RISK-BASED CAPITAL RATIO

1. The RBC ratio of an insurance company shall be calculated using the formula below. It is equal to the Total Available Capital (TAC) divided by the RBC requirement. The RBC requirement which is the Total Required Capital (TRC), shall be determined using the formula item 4 of Section 2.

$$\text{Risk Based Capital Ratio} = \frac{\text{Total Available Capital}}{\text{RBC Requirement}}$$

2. The minimum RBC ratio is set at 100%. All insurance companies are required to maintain the minimum RBC ratio and not fail the Trend Test as stated under Section 3 of this Circular.

### TOTAL AVAILABLE CAPITAL

3. Total Available Capital (TAC) is the aggregate of Tier 1 and Tier 2 capital minus deductions, subject to applicable limits and determinations.

3.1. Tier 1 Capital represents capital that is fully available to cover losses of the insurer at all times on a going-concern and winding up basis. This capital is considered to be the highest quality capital available to the insurer. Tier 1 Capital includes:

- a) Capital Stock
- b) Statutory Deposit
- c) Capital Stock Subscribed
- d) Contributed Surplus
- e) Contingency Surplus/Home office inward remittances
- f) Capital Paid in Excess of Par
- g) Retained Earnings/Home office Account
- h) Cost of Share-Based Payment
- i) Reserve Accounts
- j) Treasury Stock
- k) Excess Capital from subsidiaries, associates and joint ventures
- l) Fifty percent (50%) of the value of future bonus applicable for life companies

3.2. Tier 2 Capital does not have the same high quality characteristics of Tier 1 capital, but can provide an additional buffer to the insurer. Tier 2 Capital includes:

- a) Reserve for Appraisal Increment – Property and Equipment
- b) Remeasurement Gains (Losses) on Retirement Pension Asset (Obligation)
- c) Change in Reserve Estimates due to change in interest rate assumption
- d) Cumulative irredeemable preferred stocks
- e) Mandatory capital loan stock and other similar capital instruments
- f) Irredeemable subordinated debts
- g) Revenue reserves
- h) Subordinated term debts

Tier 2 Capital shall not exceed 50% of Tier 1 Capital.

3.3. Deductions to the aggregate of Tier 1 and Tier 2 capital include the following:

- a) Goodwill and intangible assets
- b) Investment in subsidiaries except those that qualify under item 3.4 of Section 2.
- c) Advances to officers, employees, agents and etc.
- d) Deferred tax assets
- e) Inadmissible land, buildings, and other immovable property, plant and equipment
- f) Furniture, fixtures and equipment
- g) Excess of Non-admitted Assets from Tier 1 Capital

The Excess of Non-admitted Assets from Tier 1 Capital is determined by adding the amount of Non-admitted Assets and Tier 2 Capital, and the sum is subject to the limit of 50% of Tier 1 Capital.

- 3.4. For the purpose of determining TAC, Investments in Subsidiaries, Associates and Joint Ventures shall be classified in two (2) categories, where each category shall have a different treatment as follows:
- a) Insurance related and IC regulated – To avoid double counting of capital, the amount of Excess Capital from the subsidiary shall be treated as capital for parent company.
    - i. Excess capital shall be computed as the difference between the amount of TAC and RBC requirement in order to meet the Statutory RBC ratio.
    - ii. For Joint Venture or minority shareholder arrangements, the parent company shall compute the Excess Capital using a proration of shares.
  - b) Non-insurance related or non-IC regulated – Non insurance related or non-IC regulated subsidiaries, joint venture or minority shareholder arrangements are treated as capital and an appropriate risk charge will apply, which is set equal to the risk factor for an unlisted equity.

#### RISK-BASED CAPITAL REQUIREMENT OR TOTAL REQUIRED CAPITAL

4. The RBC requirement of an insurance company is the capital that is required to be held appropriately to the risks an insurance company is exposed to.

4.1. The formula for life insurance RBC requirement is as follows:

*RBC Requirement*

$$= \text{Max} \{C6, \sqrt{C1^2 + C2^2 + C3 \text{ Equities}^2 + C3 \text{ Others}^2 + C5^2} + C4\}$$

- a) The components of the life insurance RBC requirement are:
    - i. C1 – Credit risk capital charge
    - ii. C2 – Insurance risk capital charge
    - iii. C3 Equities – Market risk capital charge for equities
    - iv. C3 Others – Market risk capital charge for other than equities
    - v. C4 – Operational risk capital charge
    - vi. C5 – Catastrophe risk capital charge
    - vii. C6 – Surrender risk capital charge
  - b) Details of the above components and risk charges are attached as Annex A.
- 4.2. The formula for non-life insurance RBC requirement is as follows:

*RBC Requirement*

$$= \sqrt{R1^2 + R2^2 + R3 \text{ Equities}^2 + R3 \text{ Others}^2 + R5^2} + R4$$

a) The components of the non-life RBC insurance requirement are:

- i. R1 – Credit risk capital charge
- ii. R2 – Insurance risk capital charge
- iii. R3 Equities – Market risk capital charge for equities
- iv. R3 Others – Market risk capital charge for other than equities
- v. R4 – Operational risk capital charge
- vi. R5 – Catastrophe risk capital charge

b) Details of the above components and applicable risk charges are attached as Annex B.

4.3. All amounts to be used in the determination of the RBC requirement for life and non-life insurance companies in Annex A and Annex B, respectively should be on their appropriate market values (marked to market) at reporting date.

### Section 3. Regulatory Intervention

1. Companies that fail to meet the required minimum RBC Ratio based on their quarterly and annual submissions are required to submit:
  - 1.1. A report explaining the cause of failure to meet the required minimum RBC ratio; and
  - 1.2. A management plan outlining the actions and/or strategies that will be done to meet the required RBC ratio for the next quarter.
2. The following are the levels of regulatory intervention based on the company's RBC ratio:

RBC Ratio (Y)	Event	Action
$100\% \leq Y < 125\%$	Trend Test	Company required to submit linear extrapolation of the RBC ratio for the next period. If the RBC ratio based on the trend test falls below 100%, move to Company Action Event.
$75\% \leq Y < 100\%$	Company Action	Company required to submit RBC plan and financial projections and implement the plan accordingly.
$50\% \leq Y < 75\%$	Regulatory Action	IC authorized to issue Corrective Orders.
$Y < 50\%$	Authorized and Mandatory Control	IC authorized and required to take control of the company.

3. **Company Action Event** shall refer to any of the following events:

- a) RBC ratio of the company is less than 100% but not below 75%, or
- b) Trend Test has failed, in the event that all have occurred:
  - i. The RBC ratio computed for the period (i.e. first quarter) is less than 125% but is not below 100%;
  - ii. The RBC ratio has decreased over the past period; and
  - iii. The difference between RBC ratio (presented in (i) above) and the decrease in the RBC ratio (presented in (ii) above) over the past period is less than 100%.

3.1. In the event of a Company Action Event, the company shall file with the Insurance Commissioner within fifteen (15) days, upon receipt of notice from the IC, an RBC plan that shall:

- a) Identify the conditions that contributed to the event;
- b) Contain proposals of corrective action that the company intends to take and that would be expected to result in the elimination of the event;
- c) Provide projections of the company's financial statement for at least eight (8) quarterly periods with and without the proposed corrective actions, including but not limited to projections of the Balance Sheets, Analysis of Operations, Surplus Accounts, RBC Exhibits and Lines of Business information relevant to the RBC plan.
- d) Identify key assumptions impacting the company's projections and the sensitivity of the projections to the assumptions; and
- e) Identify the quality of, and problems associated with, the company's business, including but not limited to its assets, anticipated business growth, surplus strain, extraordinary exposure to risk, mix of business and use of reinsurance, if any, in each case.

3.2. The Insurance Commissioner shall notify the company within thirty (30) days upon submission of RBC plan whether it may be implemented or is unsatisfactory. In case of the latter, the IC shall include reasons why it finds the plan unsatisfactory and proposed revisions to the RBC plan, and the company shall submit the revised RBC plan within ten (10) days upon receipt of notice.

4. **Regulatory Action Event** shall refer to any of the following events:

- a) The RBC ratio of the company is less than 75% but not below 50%;
- b) The company fails to submit an RBC plan satisfactory to the Insurance Commissioner, if any, within the filing deadline; or
- c) The Insurance Commissioner notifies the company of its failure to adhere to its RBC plan, and wherein the failure shall adversely affect the company's ability to eliminate the Company Action event in accordance with the approved RBC plan.

4.1. In the event of a Regulatory Action Event, the Insurance Commissioner is authorized to:

- a) Require the company to submit an RBC plan within fifteen (15) days of the event;
- b) Perform such examination or analysis, as deemed necessary, of the company's accounts, operations and RBC plan; and
- c) Subsequent to the examination or analysis, issue a Corrective Order specifying corrective actions the company is required to undertake.

4.2. The Insurance Commissioner may retain actuaries and other consultants as necessary to review the company's accounts, operations and RBC plan and to formulate the necessary Corrective Orders and the fees and costs of which shall be borne by the affected company.

5. **Authorized and Mandatory Control Action Event** shall refer to any of the following:

- a) The RBC ratio of the company is less than 50%; or
- b) The Insurance Commissioner notifies the company of its failure to satisfactorily respond to a Corrective Order as stated in Section 3 (4.1.c) above.

5.1. In the event of an Authorized and Mandatory Control Action Event, the Insurance Commissioner is authorized to place the company under regulatory control in the best interests of the company's policy holders and creditors and of the general public.

**Section 4. Reportorial Requirements**

- 1. Every insurance company is required to accomplish and to submit three (3) quarterly and an annual reports together with the required reports and plans as

discussed and enumerated in Section 3. Templates for quarterly and annual reports will be provided to the industry by the IC.

2. The three (3) quarterly submissions shall be submitted within two (2) months after the end of each reporting period, while the annual report for the period ending 31<sup>st</sup> of December shall be submitted on or before the 30<sup>th</sup> of April of the succeeding year. The table below shows the periods covered with their corresponding submission dates:

<b>Period Covered</b>	<b>Due Date</b>
As of 31 March	31 <sup>st</sup> of May
As of 30 June	31 <sup>st</sup> of August
As of 30 September	30 <sup>th</sup> of November
As of 31 December	30 <sup>th</sup> of April

3. Failure to submit the reports and plans required in Sections 3 and 4 within due date shall be subject to penalties as determined by the Insurance Commissioner.
4. All submissions shall be duly signed by the preparer, together with the Chief Financial Officer (CFO) or its equivalent.
5. All insurance companies shall cause the records and reports to be kept in a convenient manner as possible.
6. All insurance companies shall retain the records and submissions made with the IC for a period of not less than ten (10) years.

### **Section 6. Confidentiality**

With the exception of the RBC templates and schedules that will be released by the IC to the industry, all other disclosures and RBC plans filed with the Commissioner shall be kept confidential in the same manner as the other statements and reports required by the IC.

### **Section 7. Compliance with Minimum Statutory Net worth**

The company shall, in addition to its compliance with the requirements of this Circular Letter, shall comply with the minimum net worth requirements as provided in Section 194 of the Amended Insurance Code.

### **Section 8. Implementation and Effectivity**

The requirements in this Circular Letter shall be implemented on 01 January 2017.

### **Section 9. Miscellaneous Provision**

1. The IC shall review and change this RBC framework as deemed necessary.

2. The requirements for Pillar 2 and Pillar 3 of the RBC2 framework will be covered by a separate IC Circular.
3. The issuance of this Circular Letter, upon effectivity, supersedes all previously issued Circular Letters on RBC.

**DENNIS B. FUNA**  
Insurance Commissioner

## ANNEX A

### DETERMINATION OF RISK BASED CAPITAL REQUIREMENTS FOR LIFE INSURANCE COMPANIES

The formula for life insurance RBC requirement is as follows:

$$RBC\ Requirement = Max \{C6, \sqrt{C1^2 + C2^2 + C3\ Equities^2 + C3\ Others^2 + C5^2} + C4\}$$

- a) The components of the life insurance RBC requirement are:
- i. C1 – Credit risk capital charge
  - ii. C2 – Insurance risk capital charge
  - iii. C3 Equities – Market risk capital charge for equities
  - iv. C3 Others – Market risk capital charge for other than equities
  - v. C4 – Operational risk capital charge
  - vi. C5 – Catastrophe risk capital charge
  - vii. C6 – Surrender risk capital charge

#### 1. C1: Credit Risk and C3: Market Risk Capital Charges

The capital charge relating to assets is calculated by applying the risk factors to the value of specific items within the assets (see table below) for *Credit Risk* and *Market Risk*, with the exception of *Interest Rate risk*, *Credit Spread Risk* and *Currency Risk*.

Credit Risk (C1) includes Asset Default Risk and Counterparty Risk while Market Risk (C3) includes Interest Rate Risk, Equity Risk, Property Risk, Currency Risk, and Credit Spread Risks. Below are the assets and their respective capital risk charges:

##### 1.1. Risk factors for C1 and C3 except interest rate risks, currency risk and credit spread risks.

## 1.2. C3: Market Risks (Interest Rate Risks)

To calculate the interest rate mismatch risk requirement, companies must compute the cash-flows of fixed interest income assets and insurance liabilities. Cash-flows for assets and liabilities that are not sensitive to interest rates, such as fixed deposits without guaranteed interest, floating rate bonds, equities and non-guaranteed liabilities, are not included in the calculation of the interest rate risk charge and included in the Risks related to Assets.

An upward and downward interest rate adjustment (or 'shock') is applied to the risk free interest rate yield curve<sup>2</sup> to arrive at the increasing and decreasing interest rate scenarios respectively. The risk free interest rate yield curve will be provided by the IC every quarter.

The 'shocked' term structures are derived by multiplying the risk free interest rate yield curve by (1 + shock up factor) and (1 – shock down factor), where the upward and downward shock factor for each maturity 't' are specified in table below.

Under the base scenario, the present value of net insurance liabilities and fixed interest income assets exposures is computed using the risk free interest rate yield curve. The present value of net insurance liabilities and fixed interest income asset exposures are then re-computed under the increasing and decreasing interest rate scenarios. Under each scenario, the value of surplus is computed as the difference between the present value of the assets and liabilities.

The interest rate risk charge is taken as the absolute of the larger of the reduction in surplus from the downward interest rate scenario and the upward interest rate scenario. Below are the risk factors:

*Risks related to interest mismatch (Philippine Peso)*

<sup>2</sup> The risk-free interest rate yield curve is published by the IC on a quarterly basis for valuation purposes.

### 1.3. C3: Market Risks (Currency Risks)

The exposure to currencies other than Philippine Peso ('PHP') is subject to a currency risk charge on the net exposure.

To calculate the capital charge for currency risk, the net exposure including all foreign currency asset items less foreign currency liabilities, in PHP, is multiplied by a currency risk charge by a factor.

All amounts in a foreign currency should be converted to PHP at the exchange rate at the end of the reporting period. Below are the risks factors:

Currency	Risk factors (2017)	Risk factors (2018)	Risk factors (2019 onwards)
PHP/USD	9%	9%	10%
PHP/JPY	14%	15%	17%
Others	14%	15%	17%

### 1.4. C3: Market Risks (Credit spread risk)

The average credit spread in excess of the risk free interest rates for the interest rate sensitive and credit risk bearing assets must be identified before calculating the credit spread risk requirement. The spread is used to determine a 'risky' yield curve by adding the average credit spread to the risk free interest rate yield curve. The present value of the assets and liabilities is then revalued using the 'risky' yield curve. Similar to the interest rate risk charge, the resulting largest absolute fall in value of the surplus will be taken as the credit spread risk charge.

## 2. **C2: Insurance Risks (Risks relating to life insurance liabilities)**

The insurance liability risk charge is taken as the market value of liabilities under RBC Stress scenario minus the market value of liabilities under the Interim Stress scenario. Details of the scenarios are described as follows.

### 1. **Unpadded Scenario**

Insurers must project their net liability cash-flows under an Unpadded Scenario using central estimate assumptions, without non-guaranteed benefits.

*b*  
*Le cfs*  
*Le mab*

## 2. Additional Reserves

Information regarding Additional Reserves arising from the *Margin for Adverse Deviation* ('MfAD') as specified in the valuation standard circular and value of non-guaranteed benefits, such as policy dividends is also required for computation of the Total Reported Reserves.

## 3. Interim Stress Scenario

Under the Interim Stress Scenario, insurers will be required to project the net liability cash flows on a central estimate plus MfAD of 10% on all assumptions except discount rate.

## 4. RBC stress scenario

The fixed margin for adverse deviation to be used to project the net liability cash-flows under an RBC Stress Scenario is provided in the table below.

The scenarios will be discounted using the discount rates for a Gross Premium Valuation ('GPV') of life insurance policy reserves as prescribed by the IC.

The difference between the Interim Stress scenario and Unpadded scenario plus MfAD and is considered as an *Asset Liability Matching* ('ALM') adjustment under the Interest Rate Risk Charge (see 1.2. C3: Interest Risk Charge as discussed above)

Assumption	Risk factors (2017)	Risk factors (2018)	Risk factors (2019 onwards)
Interest	N/A	N/A	N/A
Mortality	+/-18%	+/-20%	+/-25%
Lapse	+/-25%	+/-30%	+/-40%
Expenses	+/-15%	+/-16%	+/-20%
Inflation	N/A	N/A	N/A
Other/Morbidity	+/-18%	+/-20%	+/-25%

↓  
ifg  
Gamb

#### **A. Mortality (positive mortality risk)**

Mortality risk reflects the uncertainty in the liability cash-flows due to the incidence of death. The stress factor for mortality risk should reflect the uncertainty in mortality parameters as a result of mis-estimation and/or changes in the level, trend and volatility of mortality rates and capture the risk that more policyholders than anticipated die during the policy term.

Mortality risk is applicable for insurance obligations contingent on mortality, where the technical provision (reserve) is assumed lower than the amounts payable. This means that an increase in mortality rates leads to an increase in the technical provisions (reserves). The risk is captured by increasing the mortality rates by a proportion of the base mortality rates.

#### **B. Longevity risk (negative mortality risk)**

The risk charge for longevity reflects the uncertainty in mortality parameters as a result of mis-estimation and/or changes in the level, trend and volatility of mortality rates and captures the risk of policyholders living longer than anticipated. The consequence of the fact that people live longer than expected is that the liabilities will increase.

#### **C. Lapse risk**

The risk charge for lapse risk reflects the adverse change in the value of insurance liabilities, resulting from changes in the level or volatility of the rates of policy lapses, terminations, renewals, and surrenders.

#### **D. Expenses**

Expense risk arises from the variation in the expenses incurred in servicing insurance or reinsurance contracts. Risk of the change of expenses is expected to predominantly arise from staff costs, cost of commissions to sales intermediaries (on the basis of the contractual terms of the arrangements), cost of IT infrastructure, cost of land and buildings occupied. The capital requirement for expense risk is assumed that there is no material increase due to other sources other than inflation in the expenses incurred in servicing life insurance obligations, and where the projected cash-flows follow a certain pattern.

↓  
c/s  
G. 2016

**E. Other (morbidity etc.)**

The risk factors for disability/morbidity risk reflect the risk that more policyholders than anticipated become disabled or sick during the policy term (inception risk), and that recovery rates are longer than expected (recovery risk).

**5. C4: Operational Risks (Risks relating to Operations)**

One percent (1%) is applied on gross premium income or net policy liabilities, whichever is greater, and is subject to cap of 10% of the total risk requirements.

**6. C5: Catastrophe Risks Capital Charge (Risks relating to Catastrophe)**

The risk factor for catastrophe risk is 0.0% for 2017, 0.005% for 2018 and 0.075% for 2019 onwards, of the total capital at risk.

The capital at risk is derived as follows:

$$\text{Capital at risk}_i = (SA_i + AB_i \times \text{Annuity factor} - L_i)$$

The total required capital for 2017 as follows:

$$\text{Required capital} = \sum_i \text{Capital at risk}_i \times 0.00000$$

6  
efg  
Gmbh

The total required capital for 2018 is determined as follows:

$$\text{Required capital} = \sum_i \text{Capital at risk}_i \times 0.00005$$

The total required capital for 2019 onwards is determined as follows:

$$\text{Required capital} = \sum_i \text{Capital at risk}_i \times 0.00075$$

Where:

- $SA_i$  = Net Sum Assured on death for each policy  $i$
- $AB_i$  = Net annualised amount of benefit on death for each policy  $i$
- Annuity factor = Average annuity factor for the expected duration over which benefits may be payable in the event of a claim
- $L_i$  = Net liability for each policy  $i$ .

The underlying assumptions for the life catastrophe risk can be summarized as follows:

- Life catastrophe risk is restricted to obligations that are contingent on mortality i.e. where an increase in mortality leads to an increase in liabilities;
- Products with negative mortality risk such as annuities, where the increase in mortality leads to a reduction in technical provisions, can be taken into account only if age diversification is applied. This as some diseases are age discriminative, for instance because influenza in the past might have given older generations protection.

↓  
G. Web

## 7. C6: Surrender Risks (Surrender Risk Capital Charge for life insurance)

The *Surrender Risk Capital Charge* (SRCC) aims to address lapse risk in excess of the levels assumed in the calculation of reserves and risk margin. For each of the participating and non-participating life insurance funds, SRCC is defined as the maximum of:

- Aggregate surrender value of the business in force in respect of policies in the insurance fund less the aggregate policy reserves of the insurance fund; or
- Zero.

The RBC requirement will equal the SRCC in the event that it is more than  $\sqrt{C1^2 + C2^2 + C3 \text{ Equities}^2 + C3 \text{ Others}^2 + C5^2} + C4$ .

## ANNEX B

### DETERMINATION OF RISK BASED CAPITAL REQUIREMENTS FOR NON-LIFE INSURANCE COMPANIES

The formula for non-life insurance RBC requirement is as follows:

$$RBC \text{ Requirement} = \sqrt{R1^2 + R2^2 + R3 \text{ Equities}^2 + R3 \text{ Others}^2 + R5^2} + R4$$

- a) The components of the non-life RBC requirement are:
- i. R1 – Credit risk capital charge
  - ii. R2 – Insurance risk capital charge
  - iii. R3 Equities – Market risk capital charge for equities
  - iv. R3 Others – Market risk capital charge for other than equities
  - v. R4 – Operational risk capital charge
  - vi. R5 – Catastrophe risk capital charge

#### 1. R1: Credit Risk and R3: Market Risk Capital Charges

The capital charge relating to assets is calculated by applying the risk factors to the value of specific items within the assets (see table below) for *Credit Risk* and *Market Risk*, with the exception of *Interest Rate risk*, *Credit Spread Risk* and *Currency Risk*.

Credit Risk (R1) includes Asset Default Risk and Counterparty Risk while Market Risk (R3) includes Interest Rate Risk, Equity Risk, Property Risk, Currency Risk, and Credit Spread Risks. Below are the assets and their respective capital risk charges:

##### 1.1. Risk factors for R1 and R3 except interest rate risks, currency risk and credit spread risks.

### 1.2. R3: Market Risks (Interest Rate Risks)

To calculate the interest rate mismatch risk requirement, companies must compute the cash-flows of fixed interest income assets and insurance liabilities. Cash-flows for assets and liabilities that are not sensitive to interest rates, such as fixed deposits without guaranteed interest, floating rate bonds, equities and non-guaranteed liabilities, are not included in the calculation of the interest rate risk charge and included in the Risks related to Assets.

An upward and downward interest rate adjustment (or 'shock') is applied to the risk free interest rate yield curve<sup>2</sup> to arrive at the increasing and decreasing interest rate scenarios respectively. The risk free interest rate yield curve will be provided by the IC every quarter.

The 'shocked' term structures are derived by multiplying the risk free interest rate yield curve by (1 + shock up factor) and (1 – shock down factor), where the upward and downward shock factor for each maturity 't' are specified in table below.

Under the base scenario, the present value of net insurance liabilities and fixed interest income assets exposures is computed using the risk free interest rate yield curve. The present value of net insurance liabilities and fixed interest income asset exposures are then re-computed under the increasing and decreasing interest rate scenarios. Under each scenario, the value of surplus is computed as the difference between the present value of the assets and liabilities.

The interest rate risk charge is taken as the absolute of the larger of the reduction in surplus from the downward interest rate scenario and the upward interest rate scenario. Below are the risk factors:

#### *Risks related to interest mismatch (Philippine Peso)*

<sup>2</sup> The risk-free interest rate yield curve is published by the IC on a quarterly basis for valuation purposes.

**Shock-up Rates:**

Maturity (Year)	2017	2018	2019 onwards
0.25	177%	182%	188%
0.50	160%	164%	169%
0.75	142%	147%	152%
1	125%	130%	135%
2	53%	56%	59%
3	55%	57%	59%
4	53%	53%	55%
5	51%	52%	54%
6	51%	52%	54%
7	51%	52%	54%
8	51%	52%	54%
9	51%	52%	54%
10	51%	52%	54%
11-20	48%	49%	51%

### 1.3. R3: Market Risks (Currency Risks)

The exposure to currencies other than Philippine Peso ('PHP') is subject to a currency risk charge on the net exposure.

To calculate the capital charge for currency risk, the net exposure including all foreign currency asset items less foreign currency liabilities, in PHP, is multiplied by a currency risk charge by a factor.

All amounts in a foreign currency should be converted to PHP at the exchange rate at the end of the reporting period. Below are the risks factors:

Currency	Risk factors (2017)	Risk factors (2018)	Risk factors (2019 onwards)
PHP/USD	9%	9%	10%
PHP/JPY	14%	15%	17%
Others	14%	15%	17%

### 1.4. R3: Market Risks (Credit spread risk)

The average credit spread in excess of the risk free interest rates for the interest rate sensitive and credit risk bearing assets must be identified before calculating the credit spread risk requirement. The spread is used to determine a 'risky' yield curve by adding the average credit spread to the risk free interest rate yield curve. The present value of the assets and liabilities is then revalued using the 'risky' yield curve. Similar to the interest rate risk charge, the resulting largest absolute fall in value of the surplus will be taken as the credit spread risk charge.

## 2. **R2: Insurance Risks (Risks relating to non-life insurance liabilities)**

The capital charge relating to non-life insurance liabilities is calculated by applying the risk loading factors as shown below to the value of the Net Claim Liability and Net Unexpired Risk Reserve ('URR') at a 75 percentile level of sufficiency. The risk charge on the *Unexpired Risk Reserve* ('URR') shall be zeroed if the *Unearned Premium Reserve* ('UPR') exceeds the URR at the 99.5%ile level of sufficiency plus the RBC risk charge. The risks factors are as follows:

Net Claim Liability	Risk factors (2017)	Risk factors (2018)	Risk factors (2019 onwards)
Fire and Allied Perils	20%	24%	30%
Marine Cargo	20%	24%	30%
Marine Hull	20%	24%	30%
Aviation	20%	24%	30%
Bonds/Suretyship	24%	26%	30%
Motor CMVL	20%	22%	25%
Motor OD	20%	22%	25%
Personal Accident	24%	28%	35%
Medical and Health	24%	28%	35%
Engineering	20%	24%	30%
Others	20%	24%	30%

Net Unexpired Risks	Risk factors (2017)	Risk factors (2018)	Risk factors (2019 onwards)
Fire and Allied Perils	29%	29.5%	30%
Marine Cargo	45%	47%	50%
Marine Hull	45%	47%	50%
Aviation	45%	47%	50%
Bonds/Suretyship	40%	42%	45%
Motor CMVL	40%	42%	45%
Motor OD	40%	42%	45%
Personal Accident	24%	27%	30%
Medical and Health	24%	27%	30%
Engineering	29%	29.5%	30%
Others	40%	42%	45%

### 3. R4: Operational Risks (Risks relating to Operations)

One percent (1%) is applied on Gross Written Premium (GWP) or net policy liability (Claim and Premium Liabilities), whichever is greater, and is subject to cap of 10% of the total risk requirements.

#### 4. R5: Catastrophe Risks (Risks related to Catastrophic Event)

A company is expected to have sufficient capital to withstand the net impact of a catastrophe event at the level of sufficiency prescribed by the Insurance Commission. This would mean the company should hold capital equal to or higher than the prescribed return period retained aggregate losses in any given year arising from Earthquake, Windstorm or combined Earthquake/Windstorm scenario.

The return period losses can be obtained from the Aggregate Exceedance Probability (AEP). The AEP is the probability that the associated loss level will be exceeded by the aggregated losses in any given year.

The occurrence of Earthquakes and Windstorms in any given year have been assumed to be independent under this approach.

The total capital required to be determined will be the maximum of the three components below:

- Prescribed year return period retained aggregated losses in any given year arising from an Earthquake;
- Prescribed year return period retained aggregated losses in any given year arising from a Windstorm;
- 60% of the combined prescribed return period retained aggregate losses in any given year arising from both the Earthquake and Windstorm.

For 2017 the required capital is computed as follows:

$$\text{Required capital} = \text{maximum} (EQ_{20\text{-year return period}}, WS_{20\text{-year return period}}, \\ 60\% \times (EQ_{20\text{-year return period}} + WS_{20\text{-year return period}}))$$

For **2018** the required capital is computed as follows:

$$\text{Required capital} = \text{maximum} (EQ_{40\text{-year return period}}, WS_{40\text{-year return period}}, \\ 60\% \times (EQ_{40\text{-year return period}} + WS_{40\text{-year return period}}))$$

For **2019** onwards the required capital is computed as follows:

$$\text{Required capital} = \text{maximum} (EQ_{200\text{-year return period}}, WS_{200\text{-year return period}}, \\ 60\% \times (EQ_{200\text{-year return period}} + WS_{200\text{-year return period}}))$$

An additional Credit Risk Charge on the catastrophe reinsurance recoveries (difference between Gross and Net aggregated losses) should also be included.
